

THE
DIFFERENCE
IS DEBEER
PERFECT ORIENTATION

DEBEER DISORIENT ADDITIVE

DEBEER
REFINISH

ENSURE FLAWLESS METALLIC AND PEARLESCENT FINISHES

An impressive new Disorient Additive has been added to our range of DeBeer Refinish WaterBase 900+ Series toners. This innovative solution will simplify your matching of OEM metallic and pearlescent effects, while improving your body shop's efficiency.

Its advanced formulation ensures perfect orientation of reflective particles, producing a high-quality OEM-standard finish from every angle.

Better hiding power

Compared to our current Flop Additive, DeBeer Disorient Additive has a more concentrated formulation. This results in better hiding power, for a sparkling, seamless OEM result.

The increased concentration also improves the coverage of the paint mix, giving you the opportunity to double the efficiency of your refinishing process, as you only require half as much of the product.

Enhanced system

The introduction of DeBeer Disorient Additive increases the number of specialist colours you can repair with DeBeer. The enhanced system makes it simple to create the best possible match of colour and effect, delighting your customers by the exceptional quality of the resulting finish.

Suitable for a range of manufacturers

DeBeer Disorient Additive is perfect for repairs on the majority of effect colours from a variety of vehicle manufacturers. Including: BMW, Chrysler, Ford, Ford USA, General Motors, Honda, Mazda, Mercedes, Mitsubishi, Toyota and Volkswagen.

How to order

DeBeer Refinish Disorient Additive is available now. The information you will need to order this product is summarised below.

Disorient Additive

WaterBase
900+ Series

Article no.	99091/1

Contents	1L
----------	----

By adding Disorient Additive to the DeBeer range, we can now help you achieve perfect orientation, time after time. To find out more, please contact your local DeBeer representative.

How to select Disorient Additive in ICRIS

Please ensure that your ICRIS software is up to date. The new Disorient Additive formula is available in version 15.0 and later.

The system will automatically default to the existing product. To access the new formula for Disorient Additive, follow the instructions below.

- In the formula dialogue, select the checkbox 'Disorient Additive'. This will then update the formulation to use the new product.

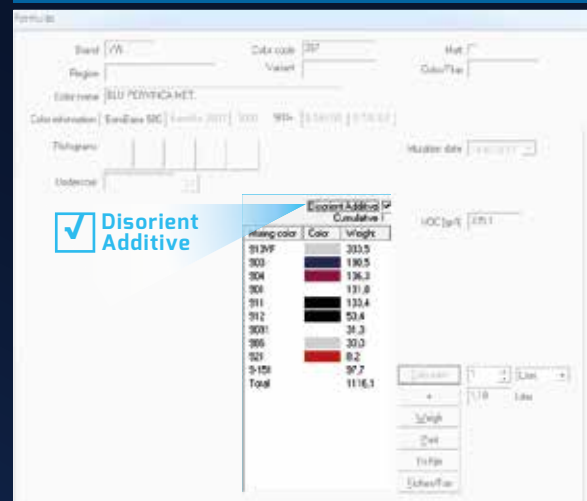

Setting Disorient Additive as default

- Select Menu, then System, then Setup
- Next select 'Disorient Additive as standard formula'. ICRIS will now use Disorient Additive for all applicable formulations.

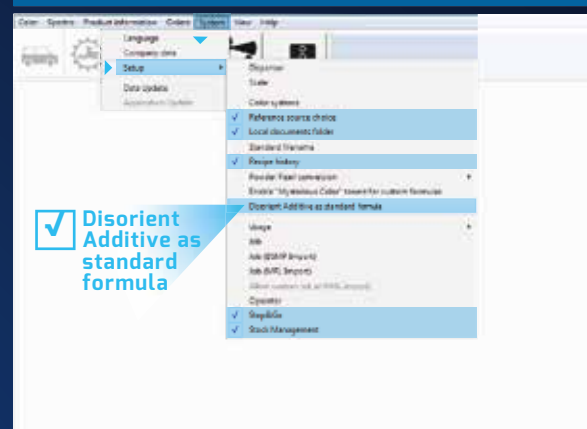

If there is a requirement to use the previous formula, simply deselect Disorient Additive as follows:

- Go to the relevant formula
- Use the formula dialogue box and deselect the 'Disorient Additive' checkbox.
